1. The following is a quotation of 35 U.S.C. 103 which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Subject matter developed by another person, which qualifies as prior art only under subsection (f) and (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

2. Claims 1-5 are rejected under 35 U.S.C. 103 as being unpatentable over Steudel in view of Torby or Grabowski et al.

Steudel teaches the claimed phase amplitude monopulse radar antenna method and structure including phased array antenna 22, feed means, and phase shift means 34. Obviously the upper and lower regions of the array antenna can be set in oppositely disposed directions in view of 1-4 of Torby or 16 and 17 of Grabowski et al.

3. The Westerman patent is cited to show antenna arrays 11 and 16.
